2-4

APRIL

2026

Iași, “International” Hotel

PROGRAM

Dear colleagues and friends,

It is our great pleasure to welcome you to the National Conference "Prof. Univ. Dr. Vasile Dobrovici", organized by the "Cuza Vodă" Clinical Hospital, Iași, a well-established national event that takes place April 2 - 4, 2026, in physical format, at the International Hotel in Iași.

The theme of this edition — "Innovation and Personalization in Obstetrics and Gynecology: From Integrative Theories to Current Practice" - offers us the opportunity to reflect together, within an innovative and integrated framework, on how science, empathy, and technology shape modern medical practice.

We aim for this conference to be not only an opportunity for networking and updating knowledge, but also an open platform that will provide excellent opportunities to share new experiences in the field and contribute to generating new ideas and modern practices in obstetrics and gynecology, as well as in related specialties.

Renowned national speakers, along with numerous international opinion leaders, come together to deliver relevant and inspiring presentations to us. We are confident that their presence represents not only a source of knowledge, but also an extraordinary motivation for all of us.

We warmly welcome you to join distinguished specialists, to share experiences in a dynamic and interactive way and to explore together the latest trends in the field!

With friendship and consideration,

SiderAL[®]

FOLIC 30mg

Utilizat în perioada sarcinii,
ajută la susținerea sănătății
mamei și fătului

UNICUL
Fier
Sucrosomial

1 plic orodispersabil pe zi

Se dizolvă direct în cavitatea bucală și nu necesită apă.

1 plic SiderAL Folic
conține:

30 mg Fier Sucrosomial [®]	10 mcg Vitamina D3
70 mg Vitamina C	1,00 mg Vitamina B6
400 µg Acid Folic	1,75 mcg Vitamina B12

La Nivel global se confruntă cu anemia:

1 din 3 femei aflate la vârsta fertilă
40% dintre femeile gravide

În România,
42,5% dintre femeile gravide
sunt anemice

Deficitul de fier și anemia feriprivă în sarcină sunt asociate cu un risc crescut de complicații (ex. greutate mică la naștere, prematuritate), depozite de fier reduse la naștere, preeclampsia și hemoragia postpartum¹.

Anemia severă din sarcină este asociată cu un risc crescut de mortalitate peripartum².

Singura formă de fier cu administrare orală, utilă în anemia de cauză inflamatorie, deoarece toate căile de absorbție a fierului sucrosomial sunt independente de prezența hepcidinei.³
